Presentation of the collaboration project AIDA-ASTIN project (see attached file)

The meeting was dedicated to problems related to the insurance of automated vehicles.

Peggy Sharon has focused her attention on the different types of automation in relation to civil liability in the event of a car accident. Particular attention was also given to the profiles of cybersecurity, highlighted as the catastrophic nature of the risk of violations of devices due to the domino effect that this may produce makes risk pooling difficult.

Giacomo Pongelli has dealt with the profiles of civil liability and in particular the identification of the possible subjects to whom the obligation to pay damages can be charged. Also in the Giacomo Pongelli report emerged aspects of cybersecurity and also ethical aspects related to the use of automated cars.

Washington Silva has focused its report on the aspects of insurance and liability in Brazil in the case of automated vehicles, connecting to the previous ones.

This was followed by a debate mainly focused on insurance profiles of Autonomous Vehicles: what is insurable? What kind of risk must be insured? where it is not, it is necessary to introduce mandatory insurance?

The Chair Sara Landini concluded inviting all participants to the Joint meeting Distribution, General Principles, Motor Insurance Wps in Marakesh in April 2019.
