Insurance Beyond Insurance

Florence 5 November 2021 h 15-17

The need to find financial resilience tools is increasingly dominant due to the increase in the frequency and harmfulness of catastrophic events and the increasingly reduced public intervention. The insurance contract, primary risk transfer contract, is flanked by other instruments of private autonomy: index-based insurance, cat and resilience bonds, weather derivatives. At the same New Technologies are changing the insurance shape. It is a question of qualifying these instruments from the point of view of the applicable discipline and asking ourselves about the need for regulatory interventions.

Chair Andrea Simoncini (Unifi)

- *Regards and introduction Peggy Sharon President of AIDA World*
